

SIGN LANGUAGE TO SPEECH CONVERSION

INTRODUCTION

American sign language is a predominant sign language. Since the only disability D&M people have been communication related and they cannot use spoken languages, hence the only way for them to communicate is through sign language. Communication is the process of exchange of thoughts and messages in various ways such as speech, signals, behaviour and visuals. Deaf and Mute (D&M) people make use of their hands to express different gestures to express their ideas with other people. Gestures are the non-verbally exchanged messages and these gestures are understood with vision. This nonverbal communication of deaf and dumb people is called sign language.

ABSTRACT

- Converts hand gestures and finger spelling to spoken language
- Develops innovative neural network system for real-time sign language translation
- Leverages deep learning and computer vision technologies
- Aims to enhance communication accessibility for deaf and hard-of-hearing individuals
